ABOUT US

Sustainable Living Fabrics has been in the commercial textile industry for over 50 years and is proudly designed and manufactured in Australia using Australian wool. We pride ourselves on creating high quality Australian made fabrics with an environmental conscience.

As a small business, we design all our fabrics in house, giving us the freedom to work closely with our customers' needs, provide custom colours, as well as develop our ranges independently. Being locally manufactured we have the ability to easily monitor, develop and understand our supply chain so we can prioritise transparency across all levels.

We have developed and maintained a strong environmental ethos over the years and we continue to refine our practices to ensure we maintain transparency and accountability for our carbon footprint.

Our vision is to create products that don't harm our environment, are made to last and support Australian businesses. The beauty of choosing to use Sustainable Living Fabrics is that you don't have to compromise on price, aesthetics or creativity to design your project sustainably.

"Since 2012 when I first took the reins of Sustainable Living Fabrics it's been my mission to combine my passion for beautiful, high quality fabrics with environmentally conscious business practices. Being a small business owner means that I can stay in touch with every part of the business. Our customers can trust that through choosing to work with us they are directly supporting our local industries and families."

- Managing Director, Liz Miles.

BENEFITS OF WOOL

AUSTRALIAN WOOL

Sustainable Living Fabrics uses only Australian wool in our 100% wool ranges and our wool rich blends. This wool is a rapidly renewable ecowool yarn which has been independently tested and audited at all stages of production to comply with EU eco label criteria.

Australia maintains world class animal health and welfare standards, as well as having strict regional and national bio-security programs to prevent the outbreak and spread of infectious diseases. There are many rigorous restrictions regarding certain herbicides and pesticides that can be used around Australian livestock, ensuring the quality of the wool and the safety of the sheep producing the wool.

FIT FOR PURPOSE

Wool has an outstanding mechanical stretch due to the Keratin protein, which cannot be replicated synthetically. It will bounce back into shape and keep performing under heavy conditions, this makes it perfect for Heavy Duty Commercial textiles.

Wool is like a spring, it has a natural crimp that allows it to return to its natural shape even after being stretched by up to 30%. Its complex coiled structure gives it resilience against becoming flat and hard, so you can count on wool to keep its shape.

BIODEGRADABLE

Wool is a renewable product, each year sheep produce a fleece, making wool a natural and renewable resource. What makes wool biodegradable is a natural protein called Keratin, the same protein found in human hair.

This gives wool its resilience and elasticity as well as its ability to decompose in soil, enriching the soil and nourishing new life. Most synthetics are extremely slow to degrade and harmful to the soil.

PROPERTIES OF WOOL

Wool has balanced thermal insulation properties - meaning it is warmer in winter and cool in the summer. Wool is hypoallergenic - It is resistant to bacteria, mould and mildew that can trigger allergic reactions in many people.

It absorbs harmful pollutants from the air and it doesn't re-emit them. It is estimated that wool used in interiors can help purify the air for 30 years.

Dust mites don't like wool - dust mites need moisture to survive. Microscopic pores in wool respond effectively to any minor changes in humidity making it quite unfavourable for the breeding and growth of the house dust mite.

Wool is naturally anti-static - Meaning wool generates very little amounts of static electricity because of the qualities of its natural wool fibres. Static attracts lint, dirt, and dust so its anti-static properties keep it much cleaner for longer.

FIRE RETARDANCY

Wool is naturally fire retardant. It difficult to ignite, has low flame spread and heat release properties; it doesn't melt and has superior self-extinguishing qualities. It makes it the perfect product for projects that have strict fire safety regulations.

All of our fabrics are independently tested to the Standards prescribed by the NCC for the fire performance of interior textiles.

AS/NZS 1530.3

AS/NZS 3837

And IMO Res. A.652 (16) 8.2 & 8.3

OUR SUSTAINABILITY

GOOD ENVIRONMENTAL CHOICE AUSTRALIA

The entire Sustainable Living Fabrics range is certified by Good Environmental Choice Australia (GECA). All of the fabrics in our collection are licensed to carry the GECA Type 1 Ecolabel Textiles and Leather (Tlv3.0-2014). Our fabrics and processes are verified by an independent assessment body to ensure we meet the environmental health, social and ethical criterias set by GECA.

green
building
council
australia

GREEN BUILDING COUNCIL OF AUSTRALIA

Furniture pieces upholstered in our fabrics, which also carry a GECA Type 1 certification for Furniture, Fittings and Foam are recognised as Level A in the GREEN STAR sustainability rating program through the Green Building Council of Australia.

The GECA Type 1 Ecolabel certification is also recognised by the Infrastructure Sustainability Council's IS rating program and can also contribute to WELL, NABERS (Indoor Air Quality) & LEED projects.

GREENFLEET

We are proud supporters of Greenfleet. By contributing to Greenfleet's biodeverse Program of planting native trees, we are also helping improve water quality, reduce soil degradation and provide habitat for native wildlife.

DONATIONS

For years we have contributed fixed annual donations to causes that align with us. Now, as our business grows, we want our impact to grow as well. Going forward instead of a fixed contribution, five cents from every meter of fabric sold will be donated, which will increase our overall contributions. We will alternate these charities annually to shine a light on more organisations doing incredible work across Australia.

[*For more information on our sustainability practices, view our website.](#)

CLIMATE ACTIVE

In 2010, we became the first company to have our entire product range and organisation certified carbon neutral under Climate Active developed by the Australian Government. We have continued to recertify to ensure our entire product line is offset from farm to fabric.

This certification encompasses our supply chain and everything it takes to create our fabric. The system boundary of this analysis is from Cradle to Grave.

Our organisation certification assesses our in house practices, such as transport, electricity, printing, recycling etc. Being a small business, our emissions here are low yet we always look for more ways to reduce internal emissions.

WARRANTY

Manufactured in Australia and third party tested to meet AS 2687-1997 performance requirements for Heavy Duty Commercial Upholstery use. All of our fabrics come with a 12 year warranty for fit for purpose use.

LOW VOC

Our fabrics are Certified low in Volatile Organic Compound emissions for indoor environmental air quality optimisation, ensuring suitability for use on furniture and acoustic panels in Green Star rated projects.

RECYCLABLE

At their end of life, our fabrics are able to be repurposed and recycled in Melbourne. For more information on our recycling policy requirements [click here](#).

UN GLOBAL COMPACT

We endorse the [United Nations Global Compact](#), the world's largest corporate sustainability initiative. This non-binding United Nations pact is a call to companies to align strategies and operations with universal principles as well as report on their implementation. These principles include human rights, labour, environment and anti-corruption, and helping to advance societal goals.

FABRIC TREATMENTS

GREENSEAL COMMERCIAL TREATMENT

Our GREENSEAL Commercial treatment carries the GECA TYPE 1 Ecolabel and is Carbon Neutral Certified through Climate Active.

GREENSEAL Commercial Treatment is a stain resistant, water repellent fabric treatment for upholstery requiring extra protection against soiling in high traffic environments.

This treatment can be applied to our entire range of Sustainable Living Fabrics. The fabric is immersed in the GREENSEAL Commercial Treatment solution, providing an invisible, highly water repellent, flexible Nano-structure which shields and protects the fabric from soil and stains. The treatment keeps the fabric breathable and moisture vapour permeable unlike waterproof fabrics that trap air and moisture which can cause odour, mold and mildew to grow. The GREENSEAL Commercial Treatment does not change the appearance or feel of the fabric.

The GREENSEAL Commercial Treatment is resistant to liquid and stains. The nanoparticle treatment reduces adhesion, allowing spills to be easily dabbed away with a clean dry cloth.

BREATHABLE	Moisture Vapour permeable to BS3546
STAIN RESISTANT	Treated for liquid and stain resistance.
CARE LABEL	Care Label 3 for soil resist.
LEADTIME	2-4 weeks, no minimums.
WARRANTY	5 years.

ULTIMATE HEALTHCARE TREATMENT

Our ULTIMATE Healthcare Treatment is a certified Carbon Neutral product suitable for healthcare environments such as hospitals, doctors clinics, health centers and aged care facilities. The ULTIMATE Healthcare Treatment is resistant to stains, moisture, odours, mildew, fungus and bacteria.

The ULTIMATE Healthcare Treatment is a full immersion medical treatment with active biocidal properties that kill bacteria on the surface as well as the bacteria that tries to grow in the spaces between the fibres formed by the weave structure.

The fabric is immersed in the ULTIMATE Healthcare solution, providing an invisible, highly water repellent, flexible Nano-structure which creates a shield to protect the fabric from not only soil and stains but includes anti-bacterial, anti-fungal, and dust mite controls. A water resistant silicone backing is applied to the fabric for an extra layer of protection.

This treatment can be applied to the entire range of Sustainable Living Fabrics textiles. The ULTIMATE Healthcare Treatment will NOT change the surface appearance of the fabric.

*Please note that due to the medical grade anti-fungal, anti-bacterial properties the ULTIMATE Healthcare Treatment does not carry the GECA Type 1 Ecolabel.

WATER RESIST	To BS3254
BREATHABLE	Moisture Vapour permeable to BS3546
STAIN RESISTANT	Treated for liquid and stain resist.
ANTI-BACTERIAL	Resistant to common bacteria such as MRSA, E Coli, and Salmonella. Inhibits the growth of other bacteria.
ANTI-FUNGAL	Resists common fungi that cause household moulds such as Penicilium, Aspergillus Niger, Candida, etc.
CARE LABEL	Care Label 3 for soil resist.
LEADTIME	2-4 Weeks, no minimums.
WARRANTY	5 years.
